Yogyakarta, Indonesia

Full-Stack Developer with a strong backend focus, combining technical execution with practical leadership. I build fast, secure, and scalable systems using JavaScript, TypeScript, Go, and Python. I don't just implement best practices — I adapt them to real team constraints, product goals, and delivery timelines.

I lead by understanding people, not just processes. I adjust workflows based on team dynamics, project pressure, and technical reality, making decisions that balance code quality, speed, and long-term maintainability. I communicate clearly, plan strategically, and take ownership when trade-offs are required.

Highly adaptive and self-driven, I ramp up quickly on new stacks, unfamiliar architectures, and complex system requirements. I bring structure when things are messy and momentum when things slow down. I'm focused on impact, not ego — delivering real outcomes for both product and team.

Work Experiences

PT. Singergi Merah Putih - Yogyakarta, Indonesia

Mar 2025 - Present

Co-Lead Backend Developer

- Lead and manage backend engineers by assigning, prioritizing, and continuously adjusting tasks based on team capacity, project risk, and delivery urgency.
- Plan and define backend architecture and development strategies aligned with business goals, technical constraints, and real-world team conditions.
- Make technical decisions that balance best practices with company realities, project timelines, and long-term system sustainability.
- Review and approve backend code with a focus on quality, performance, security, and team skill growth.
- Design and enforce secure API standards, adapting security models based on project risk and infrastructure maturity.
- Collaborate closely with frontend teams to ensure stable, scalable, and developer-friendly API contracts and integration flows.
- Drive technical hiring by conducting and leading technical interviews for backend and mobile developer candidates.
- Work directly with DevOps to optimize infrastructure, CI/CD workflows, and production stability.
- Actively improve team capability by mentoring engineers, running knowledge-sharing sessions, and facilitating solution-driven discussions to unblock technical and business bottlenecks.
- Contribute to business-level architecture by helping shape efficient product and development workflows that improve time-to-market and operational efficiency.

Jun 2023 - Mar 2025

Full-Stack Developer

- Creating backend microservices applications using Node.js, Golang, Express, and Apache APISIX.
- Working on various client projects as well as internal company projects with various technologies such as Node.js, Flask, Express.js, React.js, Vue.js, Laravel, PostgreSQL etc.
- Leading a team consisting of students to develop the backend for a company project in collaboration with various campuses.
- Interviewing students from various campuses to join the backend team for a company project in collaboration with various campuses.
- Review pull request to other developer, intern and freelancer.
- Performing vulnerability assessment tests on internal and client applications.
- Collaborating in a team consisting of frontend, backend, UI/UX, and system analysts to determine strategies and steps in application development.

May 2023

Front End Developer

- Adding features and fixing bugs in various client applications.
- Utilizing various technologies and frameworks such as Laravel, Vue.js, React.js, Bootstrap, etc.
- Employing Scrum and Agile methodologies.

PT. Raksasa Indonesia - Medan

Sep 2022 - Apr 2023

Front End Developer

Profound hybrid startup company in industries with International standard in Indonesia

- Developed responsive websites using the Material UI library, incorporating features such as QR scanning for enhanced functionality. Built inventory management websites with Redux for efficient state management in web development. Collaborated closely with UI/UX designers, backend developers, and fellow frontend developers in the creation of dynamic websites.
- Implemented various chart types, including Bar, Line, and Multi-Chart, for displaying complex data, ensuring a comprehensive user experience. Designed a map to visualize rack positions in a warehouse, leveraging OpenStreetMap to showcase the warehouse's location.
- Maintained a company website, including the Kitchen admin dashboard and Point of Sale (POS), where I added a reservation feature for

improved customer service. Adhered to the Scrum methodology in project management, facilitating effective collaboration and project delivery.

- Dabbled in 3D website development using Three.js to enhance the visual appeal of web projects.
- Provided assistance to HR and management in screening new candidates for frontend roles.

Education Level

Politeknik Negeri Medan - Medan

Aug 2019 - Aug 2022

Associate of Electrical Engineering

- Make a remote chicken feeder with control via the website and NodeMCU for the hardware
- Using Arduino app for coding hardware and visual studio code for website
- Use firebase as database for capstone project
- use reactjs and tailwind css for capstone project

Alterra Academy

Aug 2021 - Jan 2022

Certificate in a fullstack developer bootcamp

- Fullstack Engineering
- Build rest api with golang
- Build website with react, GraphQL, Redux then deploy to vercel
- Build a website of Loyalty Point Agent. we used golang for backend and deployin to aws. we used react js and tailwind for frontend and deploying to vercel. we used firebase for image storage. we use midtrans for payment gateway and github for collaborating as a team

Junior Web Developer BPPTIK

Aug 2021

Certificate in A training for junior web developer from BPPTIK

- User interface implementation
- Php language
- Structural programming implementation
- Implementation library

Skills & Other

- **Skill:** Javascript, Typescript, PHP, Python, Golang,NodeJS, BunJS, ReactJS, VueJS, NextJS, NuxtJS, Flask, Laravel, MySQL, PostgreSQL, Redis, MongoDB, APISIX, Docker
- **Language:** Indonesia, English
